## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-2, drawn to a halftone phase shift mask blank, classified in class 428 subclass 698.
- II. Claims 3-7, drawn to a method of manufacturing a halftone phase shift mask blank, classified in class 427 subclass 294.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I and Group II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case a method other than reactive sputtering, such as CVD, may be used to deposit the phase shifter film.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

During a telephone conversation with Craig McRobbie on June 23, 2005 a provisional election was made with traverse to prosecute the invention of Group I, claims 1-2. Affirmation of this election must be made by applicant in replying to this Office action. Claims 3-7 are

withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent 6,037,083 to Mitsui.

Regarding claims 1-2, Mitsui discloses a halftone phase shift mask blank comprising a transparent substrate (column 2 line 66 - column 3 line 2) and a halftone material film such that its main components are a metal, such as Mo, Ta, W, Ti, and Cr, silicon, oxygen and/or nitrogen or substances which are mixtures of one or more of these compounds, and may contain suitable quantities of C (column 5 lines 23-65).
